

Lab 7 Testing

Sean Reilly

How I tested structures:

My testing procedure has remained constant throughout this course. I isolate the specific code that I'm working on and then test it. If it works, I link it with the rest of the code and then test again. If it doesn't I read the error messages, make the proper adjustments and then go from there. As you can see by the code, the first in first out and first in last out are very similar so once I got one working it was just making minor adjustments to get the other working.
